

# ALIGNING- AND TRYOUT PRESS UNIT

201.98.

**Description:**

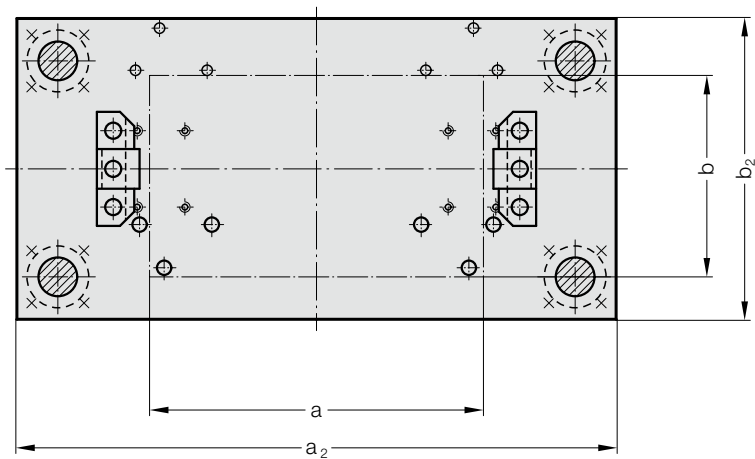

The set-up and testing press with manual operation is used for presetting and testing the insertion tools for the quick-change tool frame. The positioning and clamping functions are the same as in the quick-change frame, but in a simplified version. Moreover the press units provide ideal facilities for the press-fitting of pillars and bushes etc. – or their removal. For bluing-in and tryout of all sorts of press tools they soon prove themselves as an indispensable workshop facility. Pressing force up to 10 t.

**Material:**

Plates: St 52-2

**Execution:**

Headed ball bearing guide bushes,  
hydraulic jack,  
10 tons capacity
